

Supporting information

Filtered ortholog families

Three ortholog families (out of 12,621) did not contain even a single alignment block. Two of these families (ENST00000262304, ENST00000301788) have truncated genes found next to genome gaps in *Nomascus leucogenys*. *Pan troglodytes* gene from ENST00000397748 family also appears to be truncated due to a genome gap. The truncated version of genes from these families do not share enough sequence overlap with their orthologs, and hence Gblocks does not find any conserved block.

S1 Fig: Families with branch-specific null substitution.

S2 Fig: Distribution of total Branch-specific substitution Events (N) among ortholog families.

S10 Table: Evidence for rapidly diverging human genes

Gene	Tissue-specific expression	Phenotype	Biological Process
ADCYAP1	Biased expression in appendix and 12 other tissues	Schizophrenia	Ovarian follicle development, Behavioral fear response, and Inflammatory response
PVALEF	Low expression overall, highest in fat	-	-
PGLYRP1	Restricted expression toward bone marrow	Blood protein levels	Immune response to bacterium
PSORS1C2	Restricted expression toward skin	Autism spectrum disorder or schizophrenia	-
BTNL2	Low expression	Sarcoidosis, Autism spectrum disorder or schizophrenia, Asthma, Blood pressure	Positive regulation of T cell proliferation and interleukin-2 secretion
